DELIVERABLE 6

3D & Spatial Visualizations

Prepared by: Assim
4th-Year Student, AI & Data Science — aivancity
July 2026

Renders produced in Gemini/Nano Banana from the Deliverable 6 Visualization Brief, grounded in Deliverables 1–5 and 7. Illustrative, not construction-ready.

6.1 Overview

Six renders covering the site overview and each of the four confirmed zones, plus one evening scene, produced from the grounding brief compiled after Deliverable 7 — real species (Ghaf, Sidr, Neem, Samar), real materials (light PICP paving, light-tone EPDM), and the corrected masterplan (playground shade compliance resolved). Every render was checked against the source masterplan and materials brief before compiling this document, not accepted at face value.

6.2 Site Overview

Figure 6.1 — Full-site overview, regenerated. Numbered call-outs replace the earlier on-image text legend (avoids the model's unreliable text rendering).

[FIXED] Both flagged issues from the first version are resolved: the boundary now reads as a proper rectangle (no rounded corners), and the garbled legend text is gone — replaced with simple numbered call-outs (1–4), avoiding the model's unreliable text rendering entirely rather than trying to fix it.

[MINOR — WORTH A CAPTION FIX, NOT A REGENERATION] The number "2" is used twice (both the Shaded Promenade and the playground cluster) — likely fine once real captions are added outside the image, but worth using distinct numbers (1–5) so each of the five confirmed zones, including the Buffer Grove (NW), gets its own unambiguous call-out. Buffer Grove isn't clearly distinguished as its own numbered zone in this crop — confirm it's just an off-frame/captioning gap, not a missing zone in the underlying render.

[HOLDS UP] Both playground areas show shade canopy coverage — consistent with the resolved 76.5%/73.7% compliance fix (Deliverable 4, Section 4.6a). Court proportions, path loop routing, and zone adjacency all read consistently with the confirmed masterplan geometry.

6.3 Central Green Commons — Evening

Figure 6.2 — Evening activation of the central commons: shade-sail uplighting, path bollard lighting, multigenerational use.

[HOLDS UP] Matches the brief precisely: warm bollard/uplighting rather than stadium-style flood lighting, light-toned paving, real turf, families and multiple age groups shown using the space together — directly reflects the confirmed intergenerational adjacency (school, rehab center, mosque, villas) established in Deliverable 1.

6.4 Shaded Promenade (NE) — Daytime

Figure 6.3 — Shade canopy rhythm along the jogging/walking path, with nature-play stepping stones and log seating integrated at path edge.

[HOLDS UP] Canopy rhythm, path materials (light pavers), a runner and a family with a stroller together on the same path (accessible width, no conflict), and nature-play elements placed at path edge rather than as a separate destination — all consistent with the confirmed Deliverable 4 layout.

6.5 Active Edge (SW) — Mosque Buffer to Courts

Figure 6.4 — Graduated intensity along the SW edge: quiet turf buffer, shaded seating, enclosed Padel court, open FIBA 3x3 half-court.

[HOLDS UP] Padel enclosure correctly shown with glass lower walls and mesh upper section; FIBA 3x3 correctly shown open/unenclosed; Ghaf and Sidr named explicitly in-image, matching the sourced planting palette exactly.

[SIMPLIFIED — NOTE, NOT AN ERROR] The confirmed masterplan's Active Edge transition zone (Deliverable 4) has two distinct shade+bench structures and a separate 10×4m flexible hardstanding spread across the 70.8m gap, plus a 70.8m linear bench run. This render condenses that into a single small seating cluster. The graduated-intensity concept comes through correctly, but the render understates how much transition space actually exists — worth knowing before using this specific image to communicate scale to the jury.

6.6 Central Green Commons — Playground

Figure 6.5 — Playground activity within the Central Green Commons, shade canopy visible overhead.

[HOLDS UP] Shade canopy directly over play equipment (not just adjacent) — visually confirms the resolved shade-compliance fix. An older adult and toddler interacting on a bench directly reflects the confirmed multigenerational user base.

[DRIFT — MINOR] The masterplan specifies two distinct, separately-fenced playgrounds (Toddler 10×20m, Junior/Multi-age 15×20m — Deliverable 4). This render shows one continuous play area without a visible fence distinguishing the two age zones. Not a material error for illustrative purposes, but shouldn't be used as evidence of the age-separation design decision specifically.

6.7 Arrival Commons (SE) — Entrance

Figure 6.6 — Main entrance sequence, sheltered SE edge, accessible arrival.

[HOLDS UP] A wheelchair user and companion are shown arriving on the same level, unobstructed path as every other visitor — directly demonstrates the accessible-by-default principle from Deliverable 2 and the Universal Design Code commitment from Deliverable 1, not just stated but visualized.

[KNOWN LIMITATION] The wayfinding signage panel shows illegible placeholder text — a known limitation of current image models (coherent text rendering is unreliable). This is expected and not fixable through prompting; real wayfinding content is a detailed-design task, not a Deliverable 6 concern. Recommend cropping or not relying on this panel's text in the final presentation board.

6.8 Summary — What to Regenerate vs. What's Ready

Image	Status
6.1 Site Overview	Ready — regenerated, both issues fixed; minor duplicate-numbering caption fix recommended
6.2 Evening Central Commons	Ready as-is
6.3 Shaded Promenade	Ready as-is
6.4 Active Edge	Ready as-is — note the transition-zone simplification if used to communicate scale
6.5 Playground	Ready as-is — don't caption as evidence of the toddler/junior split specifically
6.6 Arrival Entrance	Ready as-is — crop or ignore signage panel text
